A REGULATED CUSTODY PARTNERSHIP

The Custody Layer for Credit Union Digital Assets

RBFCU is evaluating digital asset infrastructure through Stablecore. NDTC could serve as a regulated custody layer supporting member-facing adoption.

Illustrative Prospect Profile: **Randolph-Brooks Federal Credit Union**

Justin Thom | Institutional Sales Associate Application, National Digital Trust Company (In Organization)

July 2026

Agenda

01 The Opportunity Signal

Why RBFCU is a timely custody conversation

02 What Stablecore Provides

The technology layer supporting member-facing digital asset access

03 The Custody Gap

Who actually holds the assets

04 Why NDTC

A federally chartered trust bank built for regulated digital asset custody

05 The Proposed Model

NDTC underneath the stack RBFCU already chose

06 Lending Already on the Roadmap

What comes after custody

IN ONE LINE

RBFCU is already evaluating the technology layer. The custody layer remains the strategic opening.

Stablecore can support the product experience. NDTC could serve as the regulated trust-bank layer behind it once authorized.

The digital asset direction is public

“RBFCU is committed to meeting our members where they’re at. That means offering the latest technology and financial services, and serving as leaders in the development of stablecoin and digital asset capabilities.”

— Mark Sekula, President and CEO, Randolph-Brooks Federal Credit Union

\$19B+

in assets, largest credit union in
Texas

1.1M+

members across 60+ branches

\$25B

combined assets across the
founding credit union cohort

Jun 24, 2026

RBFCU publicly joined the
Stablecore/Circuit/Curql pilot

What Stablecore provides

Embedded product experience

Stablecoins, tokenized deposits, and Bitcoin are integrated directly inside RBFCU's existing digital banking app.

On/off ramps and staking

Members can move value in and out of digital assets and access staking capabilities directly.

Compliance-minded build

Stablecore recently appointed a former FDIC regulator as Head of Risk and Compliance to support governance, risk, and compliance frameworks.

A software platform, by design

Stablecore's own materials describe it as the technology layer, unifying components into a single offering for the institution, not a chartered custodian.

Stablecore's target use cases for 2026 include lending, settlements, and remittances.

Who holds the assets?

THE REGULATORY REALITY

- RBFCU is a federally chartered credit union
- Federal credit unions cannot directly custody crypto or digital assets under current NCUA guidance
- Member-facing digital asset access therefore requires a regulated third-party custody model

THE OPEN SEAT

- No chartered custodian named in the early-access announcement
- No disclosed answer for private-key control or fiduciary responsibility
- Lending and future product expansion require custody-first infrastructure
- A custody partnership, not a technology replacement

Introducing NDTC

National Digital Trust Company (In Organization) has received conditional approval from the Office of the Comptroller of the Currency to operate as a federally chartered trust bank.

BUILT FOR

Banks, credit unions, broker-dealers, corporate treasuries, and fintechs that need regulated digital asset infrastructure without building custody capabilities themselves.

Custody

Segregated, fiduciary-grade safekeeping for digital assets

Directed Trading

Client-directed buy and sell execution on custodied assets

Directed Lending

Client-directed lending and borrowing against custodied digital assets

Issuer Services

Infrastructure to support digital asset issuance and issuer workflows

The proposed model

Stablecore powers the product layer. NDTC could provide the regulated custody foundation underneath.

Beyond Custody: The Expansion Roadmap

Stablecore has identified lending, settlements, and remittances as 2026 target use cases. NDTC's directed lending capability could extend the relationship beyond custody.

Why now

Dec 2025

● OCC conditionally approves five national trust bank charter applications tied to digital asset products and services, reinforcing the path NDTC is pursuing.

Mar 2026

● OCC finalizes rule clarifying that national trust banks may conduct non-fiduciary activities in addition to fiduciary activities.

May 2026

● NCUA proposes standards for permitted payment stablecoin issuers, including certain credit union subsidiaries.

Jun 24, 2026

● RBFCU, Stanford FCU, and La Capitol FCU are named in the Stablecore/Circuit/Curql early-access program, with custody still an open strategic question.

Recommended Next Steps

1

Discovery call

Walk through the Stablecore/Circuit integration and identify where a regulated custody layer connects.

2

Defined pilot

Pilot NDTC custody behind the Stablecore-powered digital asset experience for a defined member cohort.

3

Phased rollout

Add directed trading first, then evaluate lending use cases once custody and collateral controls are established.
